Abstract

Here documented the results of exercise 6.

Contents

1 Task1 : Inclusive and Exclusive Scan (1/4 Points)	1
1.1 Describe the Workings of the Kernels (1 Point)	1
1.2 Provide an Implementation of Inclusive Scan (1 Point)	2
1.3 Modify Exclusive Scan Code to Convert to Inclusive scan (1 Point)	3
1.4 Compare Performances (1 Point)	4
2 Task 2: Finite Differences on the GPU (0/5 Points)	5
2.1 Kernel which counts/stores Number of Nonzero Entries for Rows of \mathbf{A} (1 Point)	5
2.2 Row Offset Array of CSR Format (1 Point)	6
2.3 Kernel to Write Column Indices and Nonzero Matrix Values to CSR Arrays (1 Point)	7
2.4 Code to Allocate Necessary Arrays and call CG-Solver (1 Point)	8
2.5 Benchmark Code for Different System Sizes (1 Point)	9

1 Task1 : Inclusive and Exclusive Scan (1/4 Points)

1.1 Describe the Workings of the Kernels (1 Point)

workings of `scan_kernel_1()`

Algorithm `scan_kernel_1()` - Scan within each block

- 1: Call `scan_kernel_1` ▷ with <<<256,256>>>
 - 2: Kernel initiates `shared_buffer[256]` and `my_value`
 - 3: Calculate `work_per_thread` from N ▷ Yields indices of vector chunk interfaces
 - 4: Inc. scan for single vector chunk within `shared_buffer[256]` ▷ concurrent for chunks
 - 5: All threads write `my_value` except last one ▷ (conditon) ? `exp_1` : `exp_2`
 - 6: Write result to vector Y
-

workings of `scan_kernel_2()`

Algorithm `scan_kernel_2()` - Add results from Kernels

- 1: Call `scan_kernel_2` ▷ with <<<1,256>>>
 - 2: Reduction over all Kernels
 - 3: Write to output array ▷ Exclusive Scan manner:
 - 4: `carries[threadIdx.x] = (threadIdx.x > 0) ? shared_buffer[threadIdx.x - 1] : 0;`
-

workings of `scan_kernel_3()`

Algorithm `scan_kernel_3()`

- 1: call `scan_kernel_3` ▷ with <<<256,256>>>
 - 2: Kernel initiates `shared_offset`
 - 3: Calculate `work_per_thread` from N ▷ Yields indices of vector chunk interfaces
 - 4: 0th thread of every block set `offset` as `carries` from `blockIdx.x`
 - 5: Add `offset` to all values between `blockstart` and `blockstop`:
 - 6: `Y[i] += shared_offset;`
-

1.2 Provide an Implementation of Inclusive Scan (1 Point)

1.3 Modify Exclusive Scan Code to Convert to Inclusive scan (1 Point)

1.4 Compare Performances (1 Point)

2 Task 2: Finite Differences on the GPU (0/5 Points)

2.1 Kernel which counts/stores Number of Nonzero Entries for Rows of A (1 Point)

2.2 Row Offset Array of CSR Format (1 Point)

2.3 Kernel to Write Column Indices and Nonzero Matrix Values to CSR Arrays (1 Point)

2.4 Code to Allocate Necessary Arrays and call CG-Solver (1 Point)

2.5 Benchmark Code for Different System Sizes (1 Point)
